

**Press Release: quICk finder™ – how do you clean up your samples for IC?**

Date: 5<sup>th</sup> November 2010

**The real challenge in ion chromatography often is sample preparation. There are many techniques available – which one will do the trick for your sample? Metrohm's new [quICk finder™](#) provides the answer. quICk finder™ helps users to find the right technique for the fully automated preparation of even the most complex samples – in a matter of seconds. Try out quICk finder™ now on [misp.metrohm.com](http://misp.metrohm.com)**

In a first step, the new tool asks users to specify the particular nature of their sample. They do so by selecting from a discrete set of buttons to describe the properties of their sample. The logic implemented in quICk finder™ allows to choose any meaningful combination of sample properties. quICk finder™ instantly translates the user's choice into the sequence of automated sample preparation techniques that are best suited to prepare their particular sample.

However, the new tool does not stop there. Once the appropriate method has been identified, users have direct access to detailed information about the specific solution – including instrumentation, applications and implementation in the laboratory.

quICk finder™ puts an end to wasting time and money on puzzling out the right technique for sample preparation in IC. The door to the most efficient IC system ever is wide open!

**Note to Editors:**

Metrohm UK Ltd is the UK distributor of Metrohm AG, the leading manufacturer of Ion Analysis Instruments.

**Metrohm** is synonymous with potentiometric titration, Karl Fischer titration, ion chromatography and voltammetry solving your analytical chemistry problems with quality instrumentation and support services in the technologies of POTENTIOMETRIC TITRATION, KARL FISCHER TITRATION (moisture analysis), ION CHROMATOGRAPHY, VOLTAMMETRY (trace analysis), On-line & AT line analysis and VISCOMETRY. Set up in 1995, Metrohm UK serves the key markets of the UK including the chemical, petrochemical and pharmaceutical industries, as well as the automotive and food sectors.
